Grade Level: 6 - 12

Customer Reviews

I bought this so we would not have to write in book or use an extra lined notebook. It is a basic workbook, black and white. It has additional problems to go with the lesson in book. I thought it would be the same problems as in book. They are the same type as the lesson but not same problems. It is good if you want to have extra practice. You really do not need it and the cost isn't really worth it. You also have to buy the answer book separately.

I purchased this book for my homeschooled daughter who is in the 10th grade. Each day I am more impressed with the book and have gone on to purchase other titles from the same publisher. This is real math. Practical math. Lessons are presented in a way that makes students want to learn. My daughter continually comments how much she likes this book. And believe me, she's a touch critic. This week we're learning about buying a car and last week was understanding mortgages. I think many adults in the country could benefit from this book also.

We were looking for a straight forward Consumer Mathematics workbook, for our autistic son, and this was perfect.

Used this with two kids now as a homeschooler. It is basic but it covers a lot and with a money management book it makes a good business math class.

This book covers all of the topics we are wanting to cover in our homeschool consumer math course. The work is not hard, but it does provide necessary discussion for preparing my kids to be, responsible citizens.

works for my intended purposes

Fantastic problems for my students. Problems build upon each other and just perfect for my exceptional education students.

This has been great. Allows me to teach my homeschool student about the everyday math that she will need in the real world.
