Controlled Drug Release Of Oral Dosage Forms (Ellis Horwood Books In The Biological Sciences)

Synopsis

Numerical analysis of matter transfer is an area that pharmacists find difficult, but which is a technique frequently used in preparing controlled drug release and oral dosage forms. This book provides clear and straightforward information enabling the reader to carry out numerical analysis of matter transfer - a vital process when looking at the formulation of oral dosage forms with controlled drug release. The drug is dispersed in a polymeric matrix either biodegradable or not, the basis of which is the transfer of the liquid and the drug through dosage form. Information on this diffusion is found either through mathematical treatment when the problem is simple, or through numerical analysis for more complex problems. Professor Vergnaud demonstrates and clarifies these, modelling the process of drug delivery by using numerical analysis and computerization. A simulation of the process is provided, together with a determination of the effects of all parameters, and the author uses both mathematical and numerical models to predict the preparation of new dosage forms able to fulfil specific conditions.

Book Information

Series: Ellis Horwood Books in the Biological Sciences

Hardcover: 410 pages

Publisher: CRC Press; 1 edition (July 31, 1993)

Language: English

ISBN-10: 0131749544

ISBN-13: 978-0131749542

Product Dimensions: 1.2 x 7.2 x 9.8 inches

Shipping Weight: 1.6 pounds (View shipping rates and policies)
